

Meet the Inventor/CEO: David Schmidt

LifeWave was founded in 2004 by entrepreneur and inventor David Schmidt.

Prior to 2004, David was **developing rocket engines**.

While working with the US Military, David was asked by the **Navy Seals** to create a new technology to keep the troops up at night without the use of stimulants.

David began developing the **Energy Enhancer patch**, a new light technology for the Navy Seals was born.

But, people didn't understand how light technology worked and the company only generated **50 million a year** and remained small for several years.

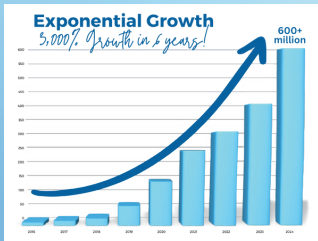

In 2008, David was asked by the National University of Ireland to research **Stem Cell Function** in humans and animals.

David investigated how wavelengths of light can improve certain peptides in the body, specifically **GHK-Cu and AHK-Cu**, and how these peptides improve **Stem Cell Function**. This field of study is known as **Photobiomodulation**.

As a result, over **70 global patents** were issued on his medical devices.

By 2018 David Schmidt had patented and introduced **LifeWave's X39 Patch!**

The world was now ready for an **affordable, safe and non-invasive** technology that was proven to **activate their own stem cells**.

Today, the LifeWave company is generating over **600 million dollars** in sales, has experienced **43% growth** year after year and is in the **top 25 companies** in our industry.

LifeWave is in **MOMENTUM** today, because the product works!
